BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

It can be expressed in transfected mammalian cells utilising a CDNA construct (see AAT79900) obtained by PCR amplification (see AAT79897-98) of BC2 CDNA and insertion of the PCR product into F9H2HC 1-3 CDNA (see AAT77374). Claimed anti-Factor IX chimeric antibodies are useful in the treatment of thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 7; Page 128; 150pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Thrombosis; therapy; Factor IX; anticoagulant; memoclonal antibody; humanised antibody; antibody engineering; light determining region; myocardial interction; angina; atrial fibrillation; stroke; kidney damage: pulmonary embolism; deep vein the pulmonary embolism; deep vein the discontinuous stroke; and the damage of the pulmonary embolism; deep vein the discontinuous stroke; and the damage of the damage 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for treating in initial post-thremboembolic induced ischaemia or reduction is required dose of a thrombolytic agent in treatment of an animal post-thromboembolic induced ischaemia, comprising administering an anti-factor. It is intibody or its fragment, optionally in combination with a plasminumen activator or thromboembolic-induced ischaemia, for providing thromboembolic surely in an animal, and for reducing a required has of a thrombolytic agent. Sequences AAU80972-AAU81004 represent antibalies and vector polypeptides used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Key

CC -1- FUNCTION: IDENTIFIES CYTOTOXIC/SUPPRESSOR T-CELLS THAT INTERACT
CC WITH MIG CLASS I BEARING TARGETS. CD8 IS THOUGHT TO PLAY A ROLE IN
CC THE PROCESS OF T-CELL MEDIATED KILLING. CD8 ALPHA CHAINS BINDS TO
CC CLASS I MHC MOLECULES ALPHA 3 DOMAINS.
CC -1- SUBUNIT: IN GENERAL HETERODIMER OF AN ALPHA AND A BETA CHAIN
CC LINKED BY TWO DISULFIDE BONDS. CAN ALSO FORM HOMODIMERS.
C1- SUBURITI: IN GENERAL HETERODIMER OF AN ALPHA AND A BETA CHAIN
CC -1- SUBCELLULAR LOCATION: Type I membrane protein.
CC -1- SUBCELLULAR LOCATION: Type I membrane protein.
CC OF CD8 ALPHA TRANSCRIPTS INVOLVE EXCISION OF THE TRANSMEMBRANE OR
CC OF CD8 ALPHA TRANSCRIPTS INVOLVE EXCISION OF THE TRANSMEMBRANE OR
CC C-1- PTM: ALL OF THE FIVE MOST CARBOXYL-TERMINAL CYSTEINES ARE USED TO
CC WHILE THE FOUR AMINO-TERMINAL CYSTEINES AND HIGHER MULTIMERS,
CC WHILE THE FOUR AMINO-TERMINAL CYSTEINES ARE NOT (BY SIMILARITY).
CC -1- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.
CC -1- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN SUPERFAMILY.
CC -1- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                         use by non-profit institutions as non-profit institutions as non-profit institutions as not removed.

SUBmitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: THIOLESTERASE THAT CATALYZES THE HYDROLYSIS OF S-

LACTOYL-GLUTAPHIONE TO FORM GLUTATHIONE AND D-LACTIC ACID.

-I- CATALYTIC ACTIVITY: (S)-(2-hydroxyacyl)glutathione + H(2)O

glutathione + a 2-hydroxy acid anion.

-I- COEACTOR: BINDS TWO ZINC IONS (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE-20083487; PubMed-10617197;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising at least part of a human immunoglobulin constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections. The present sequence represents a specifically claimed lipoteichoic acid epitope peptide mimic that can be bound by the antibody of the invention (Mab 96-110).
         The invention relates to a monoclonal antibody (MAb) to lipoteichoic acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria.
                                                                                                                                 New antibodies to lipoteichoic acid of gram positive bacteria -
to develop products for the diagnosis, prevention and treatment
infections caused by gram positive bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention of gram posit:
                                                                                                                                                                                                                                        Fischer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections. Sequences AAM94726-34 represent common peptide sequences resulting from all library panning experiments. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                      New antibodies to lipoteichoic acid of gram positive bacteria to develop products for the diagnosis, prevention and treatmen infections caused by gram positive bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1999-095329/08

The invention relates to a monoclonal antibody (MAh) to lipoteichoic acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DAA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating

or preventing

infections

caused by

gram

positive bacteria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections. Sequences AAM94705-22 represent sequences resulting from a 15mer library panning second experiment. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   be used for the diagnosis of gram positive bacterial infections.
